

Jalapeno

Filmcoat elite is an upgraded conventional filmcoat scientifically formulated for Jalapenos. Filmcoat elite improves plant nutrient uptake, supports early plant development that results in larger foliage mass to protect fruit from sun scald.

Key Benefits

1. **Vigorous leaf canopy growth:** Protect fruit from sun scald, optimizing plants for multiple harvests
2. **Larger seedlings with increased foliage:** Improve plants ability to withstand the transplant process
3. **Enhanced root development:** Strengthen plants for growth in harsh growing conditions
4. **Increased yield potential:** Benefit for the Growers

Field Trial Results

Compared with seed treated with only a filmcoat with Thiram, grower trials demonstrate that Jalapeno seeds treated with Filmcoat elite and Thiram develop more roots, stronger plant structure, vigorous plant canopy to protect fruit from sun scald, and a continued onset of flowers after first harvest. Filmcoat elite is compatible with emergis® priming, Thiram, and other crop protection seed treatments.

Need a pellet with the same benefits?

Based upon our success of ProPellet® elite for celery, Germain's has tailored the

ProPellet® as an upgraded pellet that adds the elite benefits that help support a plant growth for a healthy Jalapeno crop.
